

SUNTRONT TECHNOLOGY DEPLOYS LoRaWAN® SMART GAS & WATER METERS

- Smart meters for gas and water allow automated meter reading and help to adjust flow levels through piping by accessing a LoRaWAN network and transmitting data via third-party applications
- User management software service provides the utility manager with all necessary functions, including the ability to view usage trends and monitor each meter remotely
- Utility managers then use the data to program the LoRaWAN-enabled devices to shut off or change valves automatically when certain thresholds are met
