

just how flexible are smart lockers?

As your workplace strategy continues to evolve, ensure it's a truly flexible environment with smart lockers. Here are some additional functionality and features smart lockers can offer.

contactless lockers

Access your lockers using an employee/building card or via a smart phone app creating a touchless experience

reporting & data

Access to all the data and visibility to see how often the lockers are used, capacity, as a whole, by location or individual locker

customization

Create a user experience that works for and delights your employees. From the touchscreen interface, to how lockers can be accessed, to how long employees can access them — make it unique to your needs

on-the-fly changes

Manage your lockers and make changes the way you want to use them, from unassigned to assigned or both all within the same locker bank

locker management

Manage all of your lockers in the building or multiple buildings from one single point of access

api integration

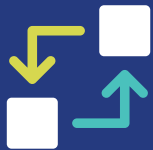

With our open api's, integrate our locker software with your apps or smart building tech — making it a completely seamless experience for your employees

flexible & user-friendly

open all lockers with just a click

Rather than opening each individual locker one-by-one, with a click of a button in the admin software open a specific locker, an entire locker bank, an entire floor of lockers or all the lockers in the building

contactless exchange

On-the-fly, with the addition of delivery software, change your lockers from a day-use locker to a contactless exchange of goods locker

locker access options

Give users the flexibility to access their lockers with their preference of 'key' — smartphone, to RFID card, to smartwatch or even biometric — the choice is theirs

workplace app integration

Empower employees through an intuitive app. From choosing a space to work to reserving a locker for personal belongings — it's a streamlined experience like no other

different locker sizes

Lockers don't have to be all the same size in the locker bank. Customize your lockers to meet the needs of your users — allow users to select the locker size they need for the day that works best for them

locks so smart...

...they know when they need cleaning. Lockers can be set to become disabled after use and automatically become accessible again after cleaning

usage-based cleaning

The cleaning crews will only need to clean the lockers that have been used for the day, creating efficiencies and time saved
